Field of the Invention The present invention relates to a method and device for measuring the light transmittance of a liquid sample. More specifically, the invention provides a method and device for measuring the light transmittance of a liquid sample over a large dynamic range without the effects of light scattering. 2. Description of Related Art The present invention can be used in a variety of liquid samples including biological samples, such as cell cultures. The present invention can also be used in non-biological samples, such as in polymer and resin samples. Analysis of liquid samples by optical means has been performed in various ways. The information obtained by such analysis is conventionally presented as a profile of some function of the liquid sample's optical properties. Examples of conventional techniques for analyzing liquid samples are shown in U.S. Pat. Nos. 4,766,632; 5,381,305; and 5,963,509. However, prior techniques have been subject to a number of problems and drawbacks, including, for example, increased complexity and time consumption.Q: Verify that a function fulf 1cdb36666d

I understand that an atom is the smallest thing that can be divided into smaller units. That is, an atom would be a unit that cannot be divided anymore. Does this make sense? A: No. A particle is smallest thing that can be divided further, an atom is smallest particle that cannot be divided anymore. A: The definition I've seen is that an atom is the smallest particle that can't be divided into anything smaller. An element is composed of one or more atoms, so
