When the camera is set to a video mode, there are two F1...If you plan on getting a new DSLR, you know that you are going to need to spend some money to make it camera worthy. DSLRs run \$500 or more, and unless you are willing to go through the trouble to put together a Nikon D40x/D40xs or Canon 1D Mark IV, your going to have to have a camera that can make good

images. One of the best DSLR's available for the price is the Olympus E-PL7. Olympus has had a reputation as a decent camera manufacturer for years now, and with the E-PL7, they want to continue this tradition. If you are looking for a cheap DSLR to start with, or if you are looking for a camera that has a great image quality, then the E-PL7 is a great choice. What Does The Olympus E-PL7 Have To Offer?

When looking at the Olympus E-PL7, I think that it is important to look at the features that it has, and what it does not have. At the price that this camera costs, you are getting a lot of features, and if you are looking for an affordable DSLR, then you are going to like this camera. The E-PL7 has an 18MP Four Thirds Sensor that does a great job of taking photographs. This is a full-frame sensor, and is very much like a

Nikon D4s/D5s. You will notice that the Olympus E-PL7 does not have the dual pixel autofocus that the Nikon D4s/D5s has, which will make some people who like autofocus and video be slightly frustrated with this camera. The main reason that you would get a DSLR with a 18MP full-frame sensor is to take good photographs, and this camera is no exception. The E-PL7 has a great built in digital viewfinder,

that will work with over 90% of lenses that are currently on the market. You can also use an external viewfinder, such as the Olympus MVF-2. You can also use the camera for video, and the E-PL7 has a dual SD card slot. You can use either the standard sized SD card, or the mini SD card. If you do use the mini SD card, then you can use it in place
