Welcome to the Cisco Unified Communications Manager Version 8.6 Release Notes. This release of Cisco Unified Communications Manager contains the following features: Cisco Unified Communications Manager is a unified solution for voice and messaging, Web conferencing, presence, messaging, analytics, and quality-of-service (QoS) for the unified communications (UC) environment. The solution provides UC clients (for example, desk phones, softphones, extensions, and user agents), UC servers (for example, Cisco CallManager, Cisco Unified MeetingPlace, and Cisco Unity Media Server), and a variety of devices (for example, Cisco CallManager-enabled IP phones, desk phones, softphones, multimedia telephones, and media-enabled devices). Cisco Unified Communications Manager is available in different licensing options and versions. The following table summarizes the different licensing options for Cisco Unified Communications Manager and the different

versions of Cisco Unified Communications Manager: Network Licensing Cisco Unified Communications Manager Number of
Devices UC Version Clients Servers Users Lines of Communication Ports UC – MMS All Client | MMS Server MMS line |
