Multidrug resistance-associated protein expression and DNA topoisomerase II alpha in primary central nervous system lymphoma. The poor prognosis of primary central nervous system lymphoma (PCNSL) is mainly due to its resistance to chemotherapy. Multidrug resistance-associated protein 1 (MRP1), also called ABCC1, and multidrug resistance protein 2 (MRP2), also called ABCC2, are ATP-dependent efflux transporters. Both are expressed in normal lymphocytes, and their expression in lymphomas suggests their role in multidrug resistance. The expression and significance of MRP1 and MRP2 in PCNSL have not been studied. We studied MRP1 and MRP2 expression in 31 cases of PCNSL using immunohistochemistry. The expression of MRP1 and MRP2 was compared with topoisomerase II alpha (TOPOIIalpha), which is the molecular target of anthracyclines and etoposide. The results of immunohistochemistry were scored semiquantitatively. The immunohistochemical analysis of MRP1 and MRP2 showed that these proteins were expressed in 10 (32%) and 8 (26%) cases, respectively. In contrast, all cases showed TOPOIIalpha expression. The combination of
