What to do with a peanut allergy? One mom's coping tips

When you have a peanut allergy, you're forced to be a label reader. Every door knob, countertop, ice-cream sundae and bottle of hand sanitizer means a potential risk. And then there's the big event: the birthday party, the family reunion, the children's school assembly. What do you do when you have to plan for a child who has a peanut allergy? Making an educated guess is hard

out in a child's body. My daughter has been peanut free for the past few years, so we haven't had to deal with it recently. I worry about the day she starts having symptoms of anaphylaxis (like hives or trouble breathing) and has to go to the ER. What if she has had no reaction to a peanut since then? I'd try to call ahead and ask if there are any restrictions, so you can plan accordingly, but honestly, you just have to wing it. You can't tell if someone's allergic to peanuts by the look on their face, or if they have to stay away from it. Have you called ahead to alert the peanut counter staff and ask if you can just bring in your own cupcakes (baked, of course), or if you should be bringing in a

special cake? I don't know if you can bring in your own food and have it passed off as your special mom cake, but I bet you can bring in your own cupcakes. It's your birthday party, after all! And if you can't bring in your own cake, your cake of choice is going to be a peanut-free one. Bring in baked goods, but don't throw caution to the wind I don't know if you can bring in your own food and have it passed off as your special mom cake, but I bet you can bring in your own cupcakes. Apple gives its engineers stock options and restricted stock grants Apple has once again seen itself at the centre of a courtroom battle, this time in the US. According to a report from The Wall Street Journal, the software used to power iOS is now based on

the open-source Chromium project, which has been downloaded nearly 2 billion times since its release in 2011. This means that Apple's core operating system is open-source, and that its software could be built and maintained by the open-source community. Apple has not commented on the issue. The company will now have to face the same legal issues as Android maker Google, including the question of whether or not its products are free and open-source. All of this comes following a previous case with The Washington Post, which revealed that Apple had restricted access to certain apps on the App Store. One such example was the game-streaming app Vuclip, which

was removed when users tried to download it to an Apple TV. At the time, the company said that they would look into it and would come to the same decision as in the past. This now means that the software is open-source, as the project has already been downloaded billions of times. upregulation of H-2 antigen declined with a concomitant increase in parasitemia. An increase in hepatic H-2 antigen expression was observed in mice in which liver infection was controlled. In contrast, the upregulation of hepatic H-2 antigen expression was not associated with a decline in parasitemia in animals that succumbed to infection. Parasites taken from mice that succumbed to infection maintained the upregulation of H-2 expression during the chronic stage of infection, and this upregulation was associated with an increase in the number of H-2 antigen-bearing cells. The possible significance of these observations is discussed. But it all started in
