It will show you the current status of the feature that is linked to this hotkey. Activate and/or deactivate notifications: The program will activate the notifications that are linked to the hotkey associated with the 'Fn' button. You will be able to deactivate them with the same button. Display the power plan status: By pressing the 'Tab' button on the 'Fn' button, you can switch from one system power plan to another. Configure the brightness keys: This tool has been designed to let users configure the 'brightness keys' as part of the 'Fn' button. It will help them manage some of the most used functions that are linked to this button. However, a Windows user will not be able to use various features.
