Phylogenetic analysis of the mitochondrial genome of the soft-shelled turtle *Trionyx sinensis*: preliminary sequence, length, and characteristics of control region. Soft-shelled turtles are among the most widely distributed freshwater turtles worldwide. In this study, the complete mitochondrial genome (mitogenome) of *Trionyx sinensis* was first obtained by DNA sequencing. The mitogenome is a circular molecule of 16,637 base pairs (bp) in length, containing 13 protein-coding genes, 2 ribosomal RNA genes, 22 transfer RNA genes and a control region, which is similar to that of other turtles and amphibians. Gene order and composition of the mitogenome are similar to those in most turtles, except for those of NADH dehydrogenase subunit 6 (ND6) and cytochrome c oxidase subunit 1 (COX1). A shorter control region (181 bp) was determined, in contrast to that (200 bp) in other turtles. In addition, a total of nine microsatellite loci were screened for *T. sinensis*. Moreover, one novel microsatellite locus was identified, which 3da54e8ca3
