You can find them all in our Download Center.[Analgesia and anesthesia. Parenteral and inhaled narcotic agents]. It is well known that analgesics vary in their efficacy for different kinds of pain, and they may either be completely or almost painless. In high doses, some potent analgesics such as the narcotic analgesics ketamine and a variety of opioid analgesics can cause coma, and in some cases, respiratory depression. Morphine and hydromorphone as well as oxycodone have been licensed in the Netherlands for the treatment of moderate to severe pain for some time and are usually well tolerated. They are sufficiently effective for post-operative pain and for chemotherapy-induced nausea and vomiting. When a patient's clinical condition worsens, continuous administration is most often preferred. While morphine and hydromorphone are very potent at the opioid receptors, their side-effects are primarily related to their inhibition of other receptors and to their very slow release into the blood stream. Side effects such as sedation, dizziness, hypotension and nausea are more pronounced when they are administered as an opioid injection instead of with a slow-release form of an opioid. When opioid analgesia is discontinued, opioid dependent patients experience an opioid abstinence syndrome consisting of increased excitability, anxiety, mental confusion, chills, giddiness, tremor, sweating, yawning and in severe cases, dyspnoea, nausea and vomiting. The usual treatment for opioid abstinence is the administration of naloxone, a very potent opioid antagonist. There is a growing awareness of the effect of opioids on cancer-related pain. Cisplatin and other chemotherapeutic agents appear to be associated with a particularly rapid and marked development of opioid tolerance. Opioids are effective in the treatment of terminal cancer pain and can improve the quality of life for many patients. The main side effects are sedation, constipation and vomiting. Hydromorphone, the most commonly used narcotic analgesic in Europe, is a potent partial mu-opioid agonist.(ABSTRACT TRUNCATED AT 250 WORDS)Q: Remote Desktop for Personal Server
