AutoCAD Architecture AutoCAD Architecture (architectural modeling) is a feature available in AutoCAD LT and AutoCAD Professional. It is one of the three Autodesk Architectural Application Programming Interfaces. The other two are VE (Vector Editing) and VEPL (Virtual Engineering Planners). It is a drag-and-drop modeling and drafting environment, and can be used to visualize, simulate, and annotate 3D spaces. AutoCAD Architecture has the same drawing toolbox as AutoCAD LT and AutoCAD. Architectural drawing features include basic drafting tools such as straight, curved, and compound lines; 3D visualizers and annotators; and spatial and topological constraints such as move, rotate, and snap. For more sophisticated drafting work, additional drafting tools such as arc and spline shapes, and the capability to write custom scripts for customizing drawing features and functions can be used. AutoCAD Architecture is suitable for use as a CAD suite, in which drafting and design are closely integrated. AutoCAD Architecture was released in 2002 as a follow-up to AutoCAD, the first CAD suite released in 1989.
