What's New in the DriverHive?

Description: Scan your PC to find outdated drivers. To avoid facing slow performance, system crashes and trouble when installing new hardware, it is important to keep your drivers up-to-date. If it is not done in time, out of date drivers might make your computer crash, slow down, or stop working altogether. Once such thing happens, not only will you lose precious time and have to perform an entire scan again to ensure you are running the correct drivers, but also you will have to start from scratch in order to find the drivers needed for the device you want to install or connect. It is then obvious that it is good to try and install the drivers right from the start if you have a device that you wish to install or connect. In case you are out of luck, you can scan for out of date drivers with the help of DriverHive. It will do the trick: scan your computer and find out what you need to make sure your hardware will function properly. By simply entering your laptop or desktop's details, DriverHive will scan and analyze it thoroughly. It will then list all the drivers that are already installed, as well as the most recent version of them. Using it is as easy as scanning your laptop or desktop: go to the application, log in, enter your laptop or desktop details and let it do the rest: it will quickly go through your device and identify the model, as well as your hardware configuration. Once it has finished, you will see all the driver versions installed, as well as the most recent version and their compatibility with your device. The interface is really straightforward, simple, and easy to understand. In addition, the application will let you know if the particular drivers are really installed or not; allowing you to click on each for install, or to close it if they are not needed anymore. Warning: out of date drivers might cause your laptop or desktop to crash, slow down, or stop working entirely. To avoid any trouble, it is better to keep your drivers up-to-date. Best of all, with DriverHive you will not need to worry anymore. It will scan your laptop or desktop and list all the drivers needed for your device, as well as the most recent version and its compatibility with your computer. Try it out now! Intended uses: Intended uses: This is a professional software designed to scan and fix drivers for Windows 7, Vista, XP, and 2000

System Requirements:

Supported languages: English, German, French, Italian and Spanish Chromebook version 4.2 is designed to run on a variety of devices with limited resources, in particular: low RAM (256MB) and little to no disk space (only 16GB available). Because it is based on Debian, Chromebook version 4.2 is also optimized for these limited resources. The memory consumption is acceptable even on a less powerful Chromebook (with a RAM of 256MB) and the apps run quickly and the system doesn't slow down in any way.
