ExifDropper Crack Free

- allows you to define keyboard macros, and to use them in any App that supports Drag'n Drop - the macros can be launched in order to create and apply new tags, alter the value of existing tags, delete tags,...

- the macros can read the tags of the dropped file, check them for validity, and perform a requested action - each macro has a fixed delay of about 500ms - the macros can be delayed in order to perform the action after a selected delay

Note: - macros are defined through a simple text file, a simple text editor would be enough - it is advised to use the installation script supplied with this software in order to generate an initial configuration file

EXIF2JPG is a small command line program that helps you to extract all the relevant information from a JPG file, such as Exif Data, GPS Info, JPG Data, Thumbnail, Movie Data, etc... It comes with a GUI that you can drag and drop the images you want to process. It is very easy to use and allows you to do a lot of things on the fly. Please note that it is NOT an EXIF reader... the GUI only serves as a front-end for the command line, it does not contain any command line interface, so you will need to launch it using a command line. A dedicated manual

is included, and the software is designed to be portable. EXIF2JPG is free software, and it is under GNU GPL license. Data Renamer is an application that helps you to rename several files and directories, folders and subfolders at once. It allows you to choose a template for the files to be renamed (including a custom one) and you can also define the new name (or value) for each of the attributes (such as File Size, File Date, File Name, and so on). Exifs4usi is a free tool that was designed to help you view and edit the "IPTC" Exif tags of your pictures. The "IPTC" is a standard (but not used very often) Exif tag that contains a lot of useful information such as copyright details, categories, keywords, user comments, etc... Exif Commander is a handy command line tool that was designed to help you get the most out of Exif tags. It can add tags to images, retrieve information about images, and more... It is very easy 77a5ca646e

----- ExifDropper is a simple GUI for ExifTool by Yakk, released under GNU General Public License. If you want to change the GPL license, please email me. Usage: ----- To install, extract the archive to some directory and set \$EXIFDROPPER to the directory you extracted to. You can also set the environment variable \$EXIFDROPPER to the directory path and the program will be automatically run whenever you launch a new session. For example you can set \$EXIFDROPPER=/usr/bin to run it at each user login. To run the program, type the following command: \$EXIFDROPPER This program uses the commands that are set to the environment variables EXIFDROPPER_COMMAND or EXIFDROPPER_COMMAND_LOW_PRECISION. You can change those variables by editing the file /etc/exifdropperrc For more information on how to use this program, please visit The following environment variables are also available: \$ EXIFDROPPER \$ EXIFDROPPER_COMMAND \$ EXIFDROPPER_COMMAND_LOW_PRECISION \$

EXIFDROPPER_PROGRAM \$
EXIFDROPPER_PROGRAM_LOW_PRECISION \$
EXIFDROPPER_PLUGIN_PATH \$ EXIFDROPPER
_PLUGIN_PATH_LOW_PRECISION \$
EXIFDROPPER_PLUGINS Known Issues:

----- 1) In some cases ExifDropper does not show all tags in the selected pictures. This happens because the tags are loaded into memory and the tags are not loaded by default. To load the tags into memory do the following: Go to the directory that contains your pictures. Open the shell and type: \$ EXIFDROPPER This will load the tags for all your pictures. Note: If you want to load only selected pictures, use the following syntax: \$ EXIFDROPPER -w file1,file2,...,fileN 2) Some archives (I hope not yours) do not support the exiftool --list-formats switch. If you are using 7-zip, 7z or

What's New in the?

This application was designed to make the use of ExifTool as easy as possible. Download:
