What you can do is set the lower frequency band controls manually and assign the track to a specific band control, like the ones below. Once you set this up and save your presets, you can then use your low band control to jump between tracks with similar bass content. Hi Matt, You're right and that's a bit unfortunate. *Bass Boost: boost bass frequencies in the low frequencies while keeping the mids and highs within the 10 dB range. Graphic EQs are always an important tool for a good mix, in fact, the linear equalizer on a stereo system is one of the first components to analyze and correct the sound. 10 Band Graphic Eq is a tool that is simple and easy to use as it allows the user to modify the audio parameters for each band separately with the use of frequency and Gain knobs. 10 Band Graphic Eq Installation: 1.
