Slicing is often considered a “spare” feature. It’s certainly not necessary to have one in your DAW to create music. But is there a purpose to using it? On the one hand, of course, it lets you grab a little “free sample” and use it in a song or a mix. That’s fine as long as you use only something you came up with yourself. But on the other hand, you can also use Egoist to create custom samples that are tailored to your needs. In this case, you are allowing others to use your audio clips as a basis for their music. Those well-known samples are often just an ingredient in the mix, but sometimes they are even the only part of the song. This means that there is no one else’s sound that you can emulate in your music. Egoist does this for you in a very intelligent way. With the slices, you use Egoist as a tool. You play with them in the same way as with any other tools. You can select slices that you like and place them somewhere. You may want to combine or contrast the

samples. You can place the slices anywhere in your track. You can, for example, quickly play with one slice, then another one, and then a third one. Or you can do a marathon session, where you sample slices for weeks. You can change the parameters of the sound using any device on your device or the dedicated parameters screen. You can play with the envelope, set the sensitivity, change the pitch, introduce reverb, delay, chorus or anything else that a real-life sample would have. The Slicing Engine: Egoist's slicing engine is rather advanced. Egoist lets you slice your audio track one sound at a time. It supports real-time playback, so when you play with a slice, it also plays immediately in your track. As soon as you stop playing, the audio is instantly replayed and can be used as a full musical track. This means that you can use this feature at any time you want. Each slice is independent of the others. The slices can be arranged one after the other or in parallel. Egoist's slicing engine is made up of

four main sections: The slicing engine is divided into sections that 09e8f5149f
