GMap.NET Crack +

GMap.NET is a simple-to-use tool designed to let you easily navigate Google Maps, which can be integrated into Windows forms. It features support for data caching, so that you can export routing and geocoding to file. It works as a standalone application without installation, apart from .NET Framework. The UI is based on a normal window with a straightforward look that shows all available options. The maps are automatically loaded at startup, and you can easily explore them, zoom in and out, add a marker, as well as jump to a specific location by entering its coordinates. It is possible to switch to another maps provider, hide the current marker or add extra ones, disable map dragging, put together a route, as well as to export and import cache files. Moreover, it implements tools for viewing a vehicle or flight radar demo, as well as for testing performance and the TCP/IP connections. The tool was evaluated for stability and compatibility. It worked just fine under Win7 Ultimate x64 and WinXP x64 SP3. The tool has not modified system settings. It does not create extra files on the disk without your permission, so that it can be removed without any trace. If you are at school and have access to a Windows 7 PC, you can run a new fresh version of Gmaps4Net (v.1.2.4) that allows for both geocoding and routing of addresses. This version also allows the use of Google direction service. This version runs as a standalone application and does not require .NET Framework. Gmaps4Net Description: Gmaps4Net is a new version of this program that comes with its own features and was just released on 02/25/2018. Download Gmaps4Net GMap.NET & Gmaps4Net (0 out of 5) ★★★★★ ★★★★★ February 1, 2017 Gmaps4Net Review by: Nate Review rating: 5 My verdict: Great I use it a lot for receiving directions in transit, both in a vehicle and for walking. Description How to download and use: Step 1: Download the Gmap.NET file and drop the downloaded file into the following folder: C:\Program Files (x86)\Gmap.NET Step 2: Open Notepad or a text editor and type the following text in it: G

What's New in the GMap.NET?

GMap.NET is a simple-to-use tool designed to let you easily navigate Google Maps, which can be integrated into Windows forms. It features support for data cache, so that you can export routing and geocoding to file. No installation necessary, apart from .NET Framework Those who just want to test the tool without integrating it into software can simply drop the program files to a custom directory on the disk and just click the executable to launch the app. Otherwise, GMap.NET can be saved to a pen drive to directly run it on any PC, provided that it has .NET Framework installed. What's more, unlike most installers, GMap.NET does not modify Windows registry settings or create extra files on the disk without your permission, thus leaving no traces behind after its removal. Simple interface with comprehensive options The UI is based on a normal window with a straightforward look that shows all available options. The maps are automatically loaded at startup, and you can easily explore them, zoom in and out, add a marker, as well as jump to a specific location by entering its coordinates. Add markers, plan routes, change the map It is possible to switch to another maps provider, hide the current marker or add extra ones, disable map dragging, put together a route, as well as to export and import cache files when it comes to routing and geocoding. Moreover, GMap.NET implements tools for viewing a vehicle or flight radar demo, as well as for testing performance and the TCP/IP connections. Chart and form based charting has never been easier. Chart.NET is an example of graphics interactivity in the form of a DLL that is dynamically loaded in memory by the charting controls. Since it can be used in a variety of Microsoft Chart control forms, and it's basically a visual DLL, it can be used for a wide range of charting applications, especially in databound applications such as Windows Forms. It provides an easy means of plotting standard charts, such as line charts, bar charts, pie charts, and also sector charts, and can easily use additional data series for your particular needs. By allowing you to create custom charts in real time, you can easily create user-defined or dynamic charting applications. Chart.NET can be added to any application, and it can also be embedded in a custom control if desired. You can modify the Chart.NET library to suit your needs or use it in your own chart

System Requirements For GMap.NET:

Windows 98, 98SE, ME, 2000, XP, VISTA Mac OS 10.1.0 or later (Mac OS X 10.3.0 or later is recommended) or later (Mac OS X 10.3.0 or later is recommended) 512MB of RAM (up to 2GB if you have more than 256MB) of RAM (up to 2GB if you have more than 256MB) DirectX 10 compatible graphics card (OpenGL 2.0 or better) Please note: It is highly recommended
