Buyers may additionally purchase a range of AutoCAD-specific (CAT) software products, such as AutoCAD Database Lite, AutoCAD LT, AutoCAD eXpress, Autodesk's flagship product (Autodesk Inventor), and Autodesk 3D Studio Max, Autodesk Dimension, Autodesk Showcase and other products. Users who prefer an open source CAD application can use LibreCAD, FreeCAD, or GIMP, among others. History Edit AutoCAD started as a proprietary program running on Sperry-Unisys-compatible mainframe computers.[5] After the switch from mainframe computers to personal computers with internal graphics controllers, the company created AutoCAD, designed to run on the new machines. The first version of AutoCAD was initially sold only to licensed programmers as an add-on product to the Kildall programming language. The first version was released in December 1982. By the time of its third anniversary, it had become one of the most popular CAD programs available. The name "AutoCAD" came from the initials of the words "auto" and "CAD". The "auto" part meant the program was a "write-once-read-many" (WORM) program, which made it easier for operators to produce documents without worrying that they would have to start over if they made a mistake. The "CAD" meant the program could "draw," "elevate" and "design" (take two-dimensional plans and build three-dimensional objects from them). Another reason for using the word "auto" was to signal the need for fewer errors as users simply keystrokes what they want instead of typing program instructions. The software became known as CAD for short, and became a generic term for any program that could do the same things as AutoCAD. A distinguishing feature of AutoCAD was that it allowed multiple operators to use the same computer, with each operator at a separate graphics terminal. The original version of AutoCAD was a standalone program running on a mainframe computer. It required an additional cost-per-seat license. In 1985, Autodesk began producing AutoCAD as a Windows operating system (OS) application, instead of as a mainframe program. The PC version allowed multiple operators to use the same computer, one person at each display. However, the PC version was still

According to a report by ESPN's Geoff Cameron, the RSL front office is "unbelievably" close to signing Brazilian midfielder Felipe with a fifth-round 2014 SuperDraft selection. The 20-year-old Felipe has been on loan to Sao Paulo since August, but he could be coming to RSL sooner than expected. The deal will reportedly include a $50,000 fee for the SuperDraft. The reported signing is also contingent on Felipe passing a physical. Felipe was named one of the top 20 players in the Saitama Summer International Player Draft. He is one of the most highly regarded prospects in the draft because of his technical skills and speed. His best years are likely still ahead of him, but we'll see if Waibel can help his talent blossom into something even more special. PS- He's also rumored to be a possible target of the LA Galaxy. /us/headlines/us-chinese-leaders-find-common-ground-1-12-15) Chinese and U.S. leaders held another meeting in Beijing on Thursday, where they were expected to finalize a deal on China's purchase of U.S. farmland and a planned increase in purchases of American farm products. The agreement was described by the State Department as part of a "broad package" of trade issues that the U.S. and China had been working to resolve. The Obama administration is looking to extend a hand to Chinese farmers, who have suffered from a drop in global grain prices over the past two years. Washington has also reportedly offered to increase its purchases of Chinese-made soybeans and corn. China has also agreed to purchase more U.S. farm goods, according to the Wall Street Journal, which cited unnamed sources. A tentative agreement was reached to buy $5 billion
