This is a freeware microphone and recorder program, it is very useful for video, audio, live streaming, but it has many more uses. KeyMargo works similar to Miro. The main difference between them is that Miro is one-man band while KeyMargo is a collective effort and this collective effort is put together by me. It is not suitable for video conferencing as it is designed for recording voices, audio, music, etc. but it also records video, KeyMargo comes with the ability to record and manage all your computer related activities. The application gives you an easy way to record any screen activity. Whether it is a website, a video, anything on the screen it will record it in the form of an audio file. This recording is stored in the application. KeyMargo is divided into multiple categories. For recording, it has audio recording. It has video recording, audio and video editing, live streaming, online streaming, screencasting, screen recording, screen capture, screencast capture, voice recorder, voice record, voice streaming. KeyMargo works in a different way from other recording applications in that it actually does not record the screen itself. It records the audio from your computer and not the screen and you can play the audio from your computer through the streaming application of your choice. It is because of this feature that it works for live streaming, online streaming, etc. Also, the application comes with tools to edit the audio files, like fix and cut. You can record everything from YouTube to Skype and you can also record things like PowerPoint presentations, Keynote presentations, and lots of other things. The application is easy to use and you can record a part of the screen or the whole screen using the slider of KeyMargo. KeyMargo comes with a lot of tools for screencasting and screen recording. You can record screencasts, demos, powerpoint presentations, etc. KeyMargo comes with the ability to record and manage your online streaming. You can record your live stream from your website or stream it from any web application. It is the ability to record live stream which make KeyMargo stand apart from other recording applications. The recorded video is stored in the application and you can later view the video from your online streaming account. If the video is too long for streaming, you can also download it and view it offline. KeyMargo comes with the ability to record a video and audio. You can record video as well as audio. 77a5ca646e

Color:BlackPricing:£0.00 Price: £0.00 (0.00) User Rating: (0 votes) Description Information travels fast in an office environment. In fact, it sometimes travels so fast that you hardly even have time to store it. This isn't about emails or memos or anything like that, but more about the information that isn't digital, because, like it or not, we still write stuff down. How many times have you taken a picture of a whiteboard during a meeting or of some notes on a white piece of paper, only to find out later that you can't really understand the writing? Well, Office Lens is an application that aims to fix that. A program that makes it all clearer When you take pictures of papers or whiteboards with your computer's camera, Office Lens can automatically detect them. Thus, it will trim the picture accordingly, so you only get the part that you're interested in. However, the most useful feature is that it will try to make the picture as clear as possible using one of three filters: Document, White Board and Business Card. Choose one depending on what you photographed and see if the app manages to add some details to the scribbling. A useful office tool While Office Lens shows its true power when you use it from a mobile phone, it can still be helpful as a desktop app. You can easily import the photos that you need to decipher and apply the filters directly to them. Just remember that the program isn't magical, so if you took a photo with a low resolution camera, don't expect it to create quality out of nothing. You can consider Office Lens a personal scanner of sorts that can help you digitize handwritten text. Make sure you never lose any of those notes by saving the images to OneNote or OneDrive, as Word or PowerPoint documents or even as PDFs.
