Routine screening by the dermatologist for multiple chemical sensitivity. Chronic rhinosinusitis with nasal polyps and asthma have been linked to sensitivities to chemicals and drugs. Multiple chemical sensitivity has been described but no criteria have been agreed upon by physicians. We report our experience with screening patients for multiple chemical sensitivity by way of a brief, self-administered questionnaire. The questionnaire and referral procedures were a modification of those used by Wolff in his studies of chemical sensitivity. The questionnaire and referral procedures were evaluated by use of a self-administered survey of patients attending a primary care Dermatology Outpatient Clinic. The potential cost savings of these techniques were assessed. All of the 16 patients who participated in the study met the criteria for multiple chemical sensitivity. The cost of the process was \$22.60 per patient. In this study, we detected multiple chemical sensitivity as often as would be detected in a general practice in a chronic disease such as asthma or chronic rhinosinusitis. The low cost and acceptability of our screening procedure to the patient, physician, and the institution are encouraging. Further studies of chemical sensitivity are needed. Induction of membrane currents and calcium rises by cyclic AMP-dependent protein kinase in the chromaffin cells of the adrenal medulla. Effects of cAMP on the voltage-dependent calcium currents (imbedded in the plasma membrane) and calcium release from the intracellular pool of chromaffin cells were examined. Results of voltage-clamp experiments on the conventional cells (intermediate-sized cells) suggest that both inward calcium currents and Ca<sup>2+</sup> rises were activated by cAMP in the presence of A23187 and that Ca<sup>2+</sup> release from intracellular stores was enhanced. These observations are in accord with the results of cAMP-dependent protein kinase from chromaffin cells reported previously. The potential implication of these results is briefly discussed. ## What's New In Adobe Photoshop CS5?

Filters are used to create a variety of effects, such as stars, fire, or waves, among others. Layers organize your image into groups of pixels (and sometimes objects, such as text or graphics). You can create and edit layers, among other things. In this tutorial, you will learn how to use the Clone Stamp and the Healing Brush to repair images and art. The Clone Stamp The Clone Stamp tool, shown in Figure 1-1, allows you to digitally "clone" pixels from one place in your image and place them over another area. This is particularly useful for if a pixel or object has been deleted or accidentally moved elsewhere. You can also use the Clone Stamp for fine-tuning images, removing those little areas of noise, scratch, or other imperfections. The easiest way to use the Clone Stamp is to select the tool by pressing Cmd+U (Mac) or Ctrl+U (Windows), and then click on an area in your image where you want to insert the sampled pixels. Photoshop creates a copy of the selected pixels in the same place you clicked. You can set the size and Opacity of this virtual version of the original image and paint over the new pixels to apply a variety of effects. Figure 1-1: Use the Clone Stamp tool to copy and paste pixels. To use the Clone Stamp tool, follow these steps: 1. Select the Clone Stamp tool in the toolbox by pressing Cmd+U (Mac) or Ctrl+U (Windows). 2. Click in the image you want to sample pixels from. 3. Preview the new image with the Clone Stamp tool. You can set the size and Opacity of the preview. 4. Drag and drop the new version of the image or the Sampled Pixels from the Virtual Clone Window (in the Sample Pixels layer, as shown in Figure 1-2) to a new location in the image. Figure 1-2: The Clone Stamp tool creates a virtual image copy. 5. If you are happy with the sample that you just placed in your image, select Ctrl+Alt+Shift+S (Windows) or Cmd+Option+Alt+Shift+S (Mac OS) to permanently place this version of the image. 6. If not, click the None button (white arrow) and then select the Clone Stamp tool to get a fresh sample of the pixels. 7. Choose Opacity from the tool options. The Healing
