Destination Unreachable 0: network unreachable 1: host unreachable 2: protocol unreachable 3: port unreachable 6: network unknown 7: host unknown 9: network. In this case, the host will work even if you try to connect when it is not available, but the connection will be terminated. If the host is available, the connection attempt fails. With the host connected, all SSH connections can be dropped - at least on Ubuntu. How to fix it If you are using Ubuntu, you can check which host is running and if it is running at all: # ifconfig eth0 This will not give you a list of hosts, but will only show that eth0 is the network interface.
