Once you have connected your two devices, you can start working on [Myelodysplastic syndromes]. In diagnosis and management of MDS the classification is a first step in the assessment of patients and therapy. Recent classifications are stepwise diagnostic and therapeutic by the French-American-British (FAB) as well as the World Health Organization (WHO) criteria. Patients with refractory anemia with excess blasts in transformation (RAEB-T), sideroblastic anemia and CMML are separated into higher risk categories by the FAB classification. Immunological alterations of MDS are important diagnostic tools. The classification of MDS is a clinical classification of the WHO-classification and that of FAB. The clinical picture and especially the course of the disease may be used to guide the genetic and cytogenetic diagnostic procedures. All patients suspected of having a myelodysplastic syndrome are included in the international MDS database (AML). The present invention relates generally to the field of object orientation in computer software and, more specifically, to software component locating. It is common in software to create abstractions of the system that are used to create complex software systems. These abstractions can be used to describe the data being processed, the tasks performed by the software, the interactions of the data, or the applications and user interfaces in which the system will be used. Abstractions are useful because the abstractions may be shared among the system, allowing for re-use of the same abstraction over multiple systems.Q: Does SKUserDefaults ensure user data consistency if the user closes the app?
