AutoCAD was designed with a ribbon-based user interface, with which you can click through a series of menus and commands to change different features of your drawing. For example, a command button labeled "line" allows you to draw lines, and a command button labeled "rectangle" allows you to draw rectangles. AutoCAD is sold by Autodesk for use on personal computers or as mobile apps for iOS and Android smartphones and tablets. AutoCAD LT is an entry-level version of AutoCAD that only supports the drawing of 2D drawings and does not support design features such as drafting, engineering, and drawing macros. AutoCAD is used by architects, engineers, and designers to create 2D drawings, 3D drawings, 3D models, and video. Its drawings are scalable, so they can be drawn on a large sheet of paper, on a small smart phone screen, or on a small tablet screen. Manually drawing in AutoCAD is more time-consuming than in most other CAD programs, but there is a great amount of automation to make AutoCAD more efficient and to speed up your workflow. Since its first release, AutoCAD has supported many different computer platforms, ranging from PC and Mac computers to tablet computers and mobile devices. You can use AutoCAD on a desktop, laptop, or tablet computer. This article describes the most common ways you can use AutoCAD. For the detailed steps to learn how to use AutoCAD, see the AutoCAD Help File. As you work with AutoCAD, keep in mind that you can edit, modify, and save your drawing. When you open your drawing, you make changes to the drawing. AutoCAD starts by displaying a small window (viewport) on your screen. The viewport shows what you have been working on recently and is divided into several panels: The top section contains a title, a scale bar, and your drawing area. The center section contains a control panel, toolbars, buttons, command menus, tool options, and zoom controls. The bottom section contains a help window, status bar, command history, and drawing and parameter options. If you are using AutoCAD for the first time, you can display the main drawing window (DRAW) or the modeling window (MODEL). For information about how to open

3D Architecture, an application which allows one to enter and create architectural drawings for architecture. The name of the architectural section is Xpress, and it is the official successor to AutoCAD Architecture. Journals and conferences The following is a list of some of the major journals and conferences covering Autodesk and the AutoCAD family: Awards The Autodesk Awards are bestowed upon individuals, groups and businesses that have made significant contributions to the progress of Autodesk products and technology. Recipients have included 3D animation experts Matt Stone and David Flusser, for their development of the software tools they used to create the DreamWorks feature film How to Train Your Dragon, the sequel to the 1999 cult classic How to Train Your Dragon. The film won the 2012 Oscars for best visual effects and best animated feature film. In 2010, Autodesk's AutoCAD Architecture team was awarded the 2010 American Institute of Architects (AIA) Honors Award in the Product Development category. The award is given to products that have dramatically improved the way the AIA profession designs and builds. A prospective study was undertaken to determine the frequency of enteric bacteria in dialysis patients and to characterize the bacterial morphology. Ten dialysis patients were monitored for 7 days and a sample of their stools taken on each day. The predominant bacterial species were *E. coli*, *Klebsiella* spp., and *Proteus mirabilis*. The bacterial morphology was examined by using phase contrast microscopy and scanning electron microscopy. In addition, serial samples of patient plasma and dialysate were examined. The dialysate and plasma concentrations of antibiotic and antiproteolytic agents were determined by HPLC. The dialysis fluid was negative for the enteric bacteria, while the dialysate samples were positive for *Enterobacter* spp 5b5f913d15

Accuracy of the World Health Organization classification for multiple myeloma: is the new classification accurate? Accuracy of the World Health Organization (WHO) classification for multiple myeloma is essential in the routine assessment of multiple myeloma in daily practice. The accuracy of the new WHO classification was assessed. All newly diagnosed patients with myeloma (age >18 years) at the MEC, Seattle, and UKMEC between 2001 and 2010, who were included in the KROG 15 trial, were retrospectively analysed. In addition, follow-up data were obtained from the MEC, Seattle, and UKMEC from 2003 to 2010. The sensitivity, specificity, positive predictive value (PPV), and negative predictive value (NPV) of the WHO classification was assessed in comparison with the International Staging System (ISS) and with the post-therapy response International Myeloma Working Group criteria (IMWG). A total of 604 patients were included (ISS stage I-III, 12.3%; stage IV, 87.7%), with a median follow-up of 57 months. According to the WHO classification, 139 patients (23.4%) had plasma cell leukemia, 320 patients (54.4%) had lytic bone disease, and 123 patients (20.9%) had a monoclonal gammopathy of undetermined significance. The Kappa values for the WHO and ISS classification for myeloma were 0.692 and 0.683, respectively (p
