Pricing of AutoCAD products and services is charged on a per-project basis. Unlike most other design software, the payment is either flat or based on percentage of project costs, rather than hourly rates. The software is available on three primary license types: perpetual license, subscription, and perpetual with subscription. This article describes the terms and conditions of the software as well as the term "lifetime". Autodesk stated in November 2009 that AutoCAD was used to create approximately 4.8 million design projects per year. As of 2010, AutoCAD was the largest CAD software in the world market. The software is released on three platforms: Windows, Macintosh, and Linux. Basic Sales Terms Autodesk offers a variety of licensing and pricing models for its software, including perpetual licenses, perpetual with subscription, and subscription. The most common model is the perpetual with subscription licensing. This licensing model charges for each project that a user accesses, regardless of how many times the user opens the file. The perpetual license, on the other hand, charges only for a project that is opened or saved. AutoCAD prices vary significantly depending on how many users are sharing a project. Perpetual licenses typically do not include a Network Price, in addition to the base price. Perpetual licenses Individual users can create new project files for their personal use on one computer. They do not need to save the project as a template. The usage of a project for any length of time creates a new usage threshold. For a number of years, a project could be used for unlimited periods without creating a new usage threshold. However, since 2009, a new usage threshold of 2 years is available, and since 2012, a new usage threshold of 1 year is available. Product key A product key is a code or other authorization number that can be used to register and activate your product key. Product keys are found on packaging, user documentation, or contact Autodesk. When you buy a new product, a product key is included. If the product key is lost, it can be re-issued or re-registered. If the product key is registered and has been inactive for over 30 days, Autodesk will refund the account registration fee. Term A license agreement is a legal agreement between a publisher and a licensee. A license is any contract which restricts the use of software. The licensed software may

The AutoCAD command-line interpreter (AutoLISP) was integrated into Autodesk 2011 (Autodesk, Inc. announced that it will discontinue developing AutoLISP as of 2013). Simplifying the interface of the AutoCAD product family AutoCAD was the first CAD product to have an interface based on Windows. This changed in Autodesk 2015, when the interface was based on a combination of Windows 8 and Microsoft Office. With this change, Autodesk could offer the Microsoft Office interface and design tool. This is not surprising given that Autodesk is a software company as well as a CAD company. There are also CAD applications such as AutoCAD 360, AutoCAD 360 Architecture and Autocad MEP that are designed to be used with Microsoft Windows. History

Autodesk first introduced AutoCAD in 1987. AutoCAD was an early success, however it did not remain unchallenged in the CAD industry. Autodesk CEO Rick Case admitted in 2005: In addition, Autodesk started using the Eclipse technology to build the core of AutoCAD. AutoCAD ran on a GUI system with the same look and feel as Microsoft Word, Excel and PowerPoint. The current versions of AutoCAD (2015) and AutoCAD LT (2007) are produced by Autodesk. Autodesk acquired the Autodesk Inc. products to the corporation. Benefits of AutoCAD When it was first introduced, CAD was not perceived as a mainstream platform for creating 2D drawings. This was because it had high costs, and because creating 2D drawings was considered not that complex. In addition, the first computer graphics display standards were just being developed. To combat these problems, Autodesk worked on software that could reduce the costs of using CAD. AutoCAD was released as a 100% shareware CAD program in

March 1987. In 1988, the official release date was April 29. Autodesk had a strong sales force and invested significantly in advertising. AutoCAD was able to sell about 200,000 licenses in the first year. The Autodesk product, called R2D2, allowed users to enter design information directly into a drawing rather than needing to prepare separate paper design drawings. AutoCAD's tools were designed to be used by non-CAD professionals, which included architects, mechanical engineers 5b5f913d15
