That's why, back in December, the developer of Cyberpunk 2077 was looking to the free-to-play Fortnite for inspiration when it released a livestream to explain how its characters will move and act. Like Fortnite, Cyberpunk 2077's battles will have a maximum of 20 players at once, and your character's ability to go into cover will allow him or her to shoot at up to five enemies. If you don't like that, you can take cover and wait for the timer to run down on enemies that you're not able to shoot at. "We've been researching and observing the development of games like 'Fortnite' for a while now," Mike Pondsmith, the lead designer and CEO of CD Projekt Red, told PC Gamer at the time. "The biggest lesson we can learn from 'Fortnite' is that the best solutions to problems are often simple. "I think that with our game, the best approach will be to make movement feel familiar to the player, and not worry too much about the amount of times we have to spawn the character." There's no doubt that the success of "Fortnite" has opened the eyes of developers to the way in which players interact with free-to-play games, and it's made CD Projekt Red reconsider how to build and test out its own game. "Most games are developed in an isolated manner, so players in the same team are unaware of how other players are behaving and what tactics work best in the game," Pondsmith said in January.
