CheckIMEI is a Windows application that displays detailed information about a mobile phone based on the IMEI (International Mobile Equipment Identity) code. Selecting the IMEI code from a mobile device is extremely easy. In order to perform this task, all you need to do is press the * button of the device, and then click on the Send IMEI code to CheckIMEI option inside the main interface. That's it. The mobile phone's IMEI code will now be displayed at the top of the interface. If you are satisfied with the results, press the Send IMEI code to CheckIMEI button. It will automatically transfer the IMEI code to our application. After that, the rest of the process will be straightforward and most of the operations that require the IMEI are going to be intuitively accessible. Once you have entered the IMEI, you are going to be asked to enter your phone's phone model, brand, and region information. As you can see on the image below, it is extremely easy to accomplish all of this, thanks to CheckIMEI's clean and simple design. Once the information is entered, the IMEI will immediately be displayed on the right side. On the left side, the information regarding the mobile phone is displayed as well. To the best of our knowledge, the information displayed on the right side is relevant, although some of the data is optional. After you have made sure that everything is alright, press the OK button to proceed with the installation process. And that's all. CheckIMEI will now be installed on your PC and will automatically perform all the tasks mentioned above. To make sure that everything is working correctly, you are recommended to use a tool such as DeviceView and System Information. This way, you will be able to easily check the installed program. If you have any questions about the application, just contact its official website.
