Dec 25, 2011 In the long term, the easy solution is to install the Steam application. It contains many hooks in the system, so you can re-install it without downloading and uninstalling it.. Dec 11, 2017 I don't know if this will work, but you can try. Install unrar 32-bit and unrar 64-bit from Beta Version Un-Install the SecuRom Application (Used in Securom Launcher). Make sure you are using LTS and not a pre 1.0.0.x build. (You may have to use a pre 1.0.0.x to run other games but with just GTA4 you don't need this) Download SecuLauncher-1.0.4.exe and SecuLauncher-1.0.4-x64.exe (IE: SecuLauncher-1.0.4.exe will show SecuROM Launcher: 1.0.4 etc...) Extract both files **NOTE:** SecuLauncher (Official LTS) is required to launch DLC, patches and patch the GTA4 v1.0.3.0 Launch Game (You shouldn't need to upgrade the x64 version of SecuROM to launch the game) Change the Icon (Optional) Uninstall Securom Launcher. **NOTE:** If you are using Securom Launcher then you may need to reinstall Securom Launcher (although you should uninstall Securom Launcher first) Install the x64 version of Securom Launcher Fix Size Open securomlauncher.ini Add this in, so it reads: AllowFileUpgrade=1; **NOTE:** If you don't have this, you will need to make sure you have the version of the launcher that does (you can use this to check) Close Securom Launcher Run Game If you don't have the SecuromLauncher - 1.0.4-x64.exe you might need to download the x64 version. **NOTE:** The x64 version is needed to load the game. It is the x64 equivalent of the x86 version. **NOTE:**: Make sure you use LTS as mentioned in step 2 Unknown Error 1cb139a0ed
