The present invention relates to a frame, chassis, and/or cabin of a vehicle. The invention further relates to a chassis and/or a chassis frame of a vehicle. DE 10 2010 035 270 A1 discloses a vehicle chassis frame with a frame body, a transverse upper frame strut, and a transverse lower frame strut which are joined by means of frame cross members. DE 10 2008 038 292 A1 discloses a chassis for a passenger car, having a front frame, a rear frame, a floor frame, and side frame members which connect the floor frame and the side frames. The side frames form the side sills which are arranged one after the other in the direction of travel in the longitudinal direction of the vehicle. The side frames each have a top section and a bottom section, the bottom sections of the side frames being connected to one another. DE 10 2008 038 293 A1 discloses a chassis for a passenger car, the chassis having a rear frame, a front frame, and four side frames which are arranged in the direction of travel in the transverse direction of the chassis and which are connected to one another by frame cross members. The frame cross members are arranged symmetrically with respect to the longitudinal center axis. DE 10 2007 059 470 A1 discloses a vehicle chassis which has a chassis frame, a front frame, and a rear frame. In addition, the chassis frame comprises a connecting section which is designed as a sill and which connects the front and rear frame in their top and bottom longitudinal edge regions, and a joint frame which is arranged between the sill and the front frame and which protrudes through the sill.

Q: how to check if a variable is defined in javascript I have a javascript file that calls another file. Here is a small snippet of the code: if (vwNoBanks) { var halo = document.createElement('div'); halo.style.display = "block"; halo.style.position = "fixed"; halo.style.top = "0"; halo.style.left = "0"; halo.style.backgroundColor = "green"; halo.style.zIndex = "999"; halo.style.width = "100px"; halo.style.

What's New in the?

Q: Set a integer into Swift SocketClient via JSON I'm creating a test app where I want to set the value of integerVar to a variable from the JSON coming in. The way I'm going about this is not working. var client = SocketClient(url: URL(string: ""!), delegate: self) var json = //get JSON from url var someInteger: Int? = json["someInteger"] as! Int var integerVar = someInteger! + 1 println("Variable count: \((integerVar)") client.add(integerVar!, key:"myIntKey") //This is where the problem is client.endConnect() Right now, my console log returns the variable count as NaN. Any help would be appreciated, thanks in advance! A: You need to use the method request.add("key", value: "value", parameters: parameters) Instead of client.add(integerVar!, key:"myIntKey") I tested on my side and it works. To make sure I also get and I have to pass it as string: let params = ["number": "+1"] let data = try! JSONSerialization.data(withJSONObject: params, options:.prettyPrinted) client.request("", parameters: data, key: "myIntKey") response will be {"number": "+1"} If the number is not an int, you can use the method: request.add("number", value: "\((1)", parameters: nil, key: "myIntKey") and then the response will be "1" The Dating Guy: Ashley Hundley Hi my name is Ashley and im a sophomore in highschool. I love reading, crafting, cooking, making jewelry, doing arts and crafts, going to the beach, and hanging out with friends. Tell us a little bit about yourself I'm 17 and I love spending time with friends! I love doing the normal things people do, like hanging out at the movies, going shopping, etc. I like to read and I love cooking food. How did you get started with using the sites for dating? I've been on craigslist and facebook ever since I was a
