Applying filters and effects In both versions of Photoshop, you can apply filters and effects to your photos or images. You can find these in the Filter palette. The Filter palette features many effects, including distortions, distortions, brush strokes, hand-drawn effects, gradients and color corrections. You can also apply filters, which can be further adjusted by dragging the individual filter's settings along the right side of the image. Filters include blurs, sharpening, erasing, effects for skin and hair, color corrections, photo filters, posterizing, sepia tones, dodging and burning. Some effects such as rolling your photograph out, posterizing and dodging are available for both versions of Photoshop. As well as putting filters on images, you can also edit and retouch them. For more information see the section below on editing photos. Adjusting the size and position of an image

You can resize and reposition any image using Photoshop or Photoshop Elements. You can click on the image in the layers panel to see the original image. Then you can drag the position of the image down the X and Y axis. When you click, you get a selection box. Inside the box you can size the selected parts of the image that are affected by the drag. Click and drag outside the box and the resize doesn't happen. The following steps show you how to resize an image. Click the image to select it. Drag the image to one side or top and bottom of the canvas. A green box appears. Drag the selected parts of the image within the green box. Select File → Save. If you want to save the image as a different format, click and drag on the Save as pop-up menu. Both versions of Photoshop (CS/CC) and Elements can resize and reposition any image, and although the process is similar it is much

quicker and easier to use in Photoshop Elements. Rotating or flipping images
Both versions of Photoshop let you rotate a picture 90° clockwise or
counterclockwise. This works in the same way as the Edit → Rotate CCW or
Rotate CW menu command. When you rotate an image, the rotation happens
in the center of the image. You can change the center point of rotation by
clicking and dragging the rotation handles or following the instructions in the
