AVG Antivirus is the most popular free antivirus software. AVG is trusted by millions of users worldwide and

the company provides software for both Windows and Android devices. Anybody can choose to install the free version but it lacks the necessary features to protect the computer. In order to resolve this problem the company has put the latest generation up to an entire industry of its free anti-malware scanners. The product consists of three types of security features:

- The basic protection only scans on-demand for a selected period of time
- The free security scan will update itself on a regular basis and constantly detect the threats on the user's PC. The automatic scan can be used on a specific PC, on a network or on a set schedule.
- The ultimate protection provides full-featured antivirus to the entire user's PC. In this detailed review we will highlight the features of AVG which make it stand out and get rid of the bugs associated with the original free version. What's New in v1.1.7.1: - Fixed password recovery issues by the new restore method - Fixed all the issues related to other languages - Fixed all the issues which left in the phone support. Check out What's New. Messenger Password Decryptor Portable is an application to quickly obtain the details for any configured messenger account of any platform. The application's name refers to the fact that in order to recover the account, the application must find the saved details for the messenger itself. It works and acts like a winrar or any other software that can open and convert archive files, it's like that, except that it's capable of opening any list of accounts and extracting the password information from the configuration file .Extract Password Once you install this app, it will show a list of the logged accounts. The app requires the logged user to be present on the system to be able to recover the accounts. The displayed list will show all the available accounts, including accounts for non-platform related software. The requirements for being able to extract the login details to this application are different, depending on the features of the client the list is created from. This is an automated application, and therefore it is not able to provide full support to all installed software. You have to make sure that the application only displays the credentials related to messenger clients that you are using. If the messenger is closed, you can open the configuration file and read the data. The application is simple and easy to use, and if the desired information is present on the system, it will display the accounts information and set the parameters for quick access. If the application is unable to open the password file, you can configure it to wait for a fixed amount of time
