Integrated Physique Model Unlike the previous series, where the player animations were derived from player “physiques,” players in FIFA 22 will have unique animations. The player animations are derived from real-life player movements. The integrated Physique Model enables the players to have authentic animations. In-Game Physics In-game physics is the unseen force that drives a player to perform and behave the way they do. In-game physics are the core driving force behind each player’s performance. The effect of in-game physics forces are easier to see in FIFA 21, which uses human-like player movements. With the introduction of in-game physics to FIFA 22, the player movements become more accurate and less human-like. Passing FIFA 22 uses the same core passing system as FIFA 21. This will enable higher-quality passing while keeping the action quick and clean. Ball Control FIFA 22 uses a new ball control system that significantly improves the balance between quick and accurate ball control. In FIFA 21, there were certain situations where players could take too long to control the ball in a tight space and either miss a chance to score or shot the ball wide. In FIFA 22, there will be more specific tools to help you take control of the ball, making it easier to score and be more accurate. New Ball Control System FIFA 22 features a brand new ball control system which includes two core factors. The first is ball control; the ability to perform precise and accurate ball control with more fluidity. The second factor is dribble control; the ability to use the movement of the ball to perform specific actions, like controlling the ball into a precise spot, or cut-backs/through balls towards an area where your teammate is waiting for a pass. The introduction of the new ball control system is driven by the feedback the team has collected from fans and players. Moving the Goal Line In FIFA 21, the move meter of the ball was an average of the distance from the ball to the opposing team’s defensive wall. FIFA 22 will allow you to move the goal line (i.e. the amount of space between the player and the defensive wall), which will make it easier to score and make it more exciting.

Or, jump straight into the world's #1 club challenge in FIFA Ultimate Team™. . New ways to score... FIFA's true signature is its gameplay intelligence: an intelligent opponent reacts to everything you do in a way that feels completely organic. But what does 'intelligence' mean? It means that as a player, you have more control over your performance than ever before. Go forwards? You can. Go backwards? You can. Invert? You can. Kick it long? You can. Shoot it long? You can. Knuckle the ball? You can. You can even dance around and fool the intelligent opponent if you want to. Every game mode, in FIFA Ultimate Team™, and online game have been built with these FIFA ideas in mind. And this is the greatest feature: as you play and pass in a FIFA game, your performance is more precise than any other time in the series. Your skills are measured more closely and differently than before. You can fit your technique perfectly to a game and get rewarded for it. You can over-control and show off your trickery; but even when you make a mistake, you can improve on it. The result is a more accurate and fun way to pass, dribble, shoot, and tackle. But there's another key thing that allows FIFA to feel more closely-based on the real thing: It adapts to your strengths and weaknesses. You can see this at work as soon
